Regarding claims 1 and 15, referring to Figs. 1-13, Lazzouni teaches an electronic reading device system, comprising: an electronic reading device (10) (i.e. electronic pen) for use with a formatted surface (14) having an address pattern thereon, the electronic reading device (10) including a sensor (70) for detecting portions of the address pattern; wherein positions of the electronic reading device (10) relative to the on a formatted surface (14) are determined based on the detected portions of the address pattern and a separate electronic device (140) that includes a display screen for displaying feedback relating to the detected portions (see abstract, from col. 4, line 8 to col. 5, lines 54, from col. 8, line 65 to col. 9, line 38).

Regarding claim 2, Lazzouni further teaches the detected portions of the address pattern (14) correspond to information written using the electronic reading device (10) on the formatted surface, said feedback comprising a representation of the information written using the electronic reading device (10) (from col. 8, line 65 to col. 9, line 62).

Art Unit: 2674

Regarding claims 3 and 4, Lazzouni further teaches the written information comprises handwritten text, said representation comprising text characters that correspond to the handwritten text (col. 4, lines 51-65).

Regarding claim 21, Lazzouni teaches the detected portions of the address pattern correspond to information written using the electronic reading device (10), the step of converting the information into feedback further comprising the step of converting the written information to text characters, said feedback comprising the text characters (col. 9, lines 14-6 and col. 14, lines 16-39).

4. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
